# Dear Hiring Manager

I am excited to apply for the **Junior Frontend/Full-stack Engineer** position at **DPNA**. With a strong focus on **React and Next.js**, along with hands-on experience with **Tailwind CSS, Prisma, Drizzle ORM, and MySQL**, I am eager to contribute to your team while continuing to grow as a developer.

Since starting my coding journey, I have been passionate about building clean and efficient web applications. I have worked on personal projects where I implemented authentication and user management using tools like **Auth.js** and **Better-Auth**, which allowed me to build secure and flexible authentication flows. For data fetching and state management, I frequently use **TanStack Query**, enabling responsive and optimized client-server communication. These experiences have strengthened my ability to deliver end-to-end solutions with modern web technologies.

I am particularly drawn to DPNA because of your young and creative environment. I thrive in collaborative, agile settings and enjoy learning from experienced colleagues while bringing my own enthusiasm and problem-solving skills to the team.

Thank you for considering my application. I look forward to the opportunity to discuss how my technical skills and passion for web development can contribute to the success of DPNA
